

Swift execution
of your bright ideas

Key features

- Full Xcode interoperability — just open and create Xcode projects from AppCode. The latest Xcode is supported.
- Smart automatic actions for CocoaPods, a popular Objective-C library manager.
- Support for Objective-C, C, C++ (including C++11 and libc++), Swift, HTML, JavaScript, XML, and CSS.
- Finest coding assistance and safe automated refactorings.

System requirements

- OS X 10.9 or higher
- Xcode 6.4 or higher
- 2 GB RAM recommended
- 200 MB hard disk space + at least 200 MB for caches.

Key Facts

AppCode is a professional iOS/OS X IDE built on IntelliJ Platform. It helps developers create outstanding apps for Apple devices such as Macs, iPhones and iPads.

Key Benefits

In the finest tradition of JetBrains IDEs, AppCode's biggest strengths are advanced code analysis routines and a smart editor enabling intelligent code completion, powerful refactorings, auto-import, one-click code navigation, automatic code formatting, and many more productivity-boosting features. This, along with transparent integration with Xcode, smart actions for CocoaPods and support for multiple languages, makes AppCode a powerful working tool — not only for professional iOS developers but also for those just joining their ever-growing camp.

- Code analysis to keep a watchful eye on the quality of your code, with on-the-fly quick-fixes available.
- Integrated graphical debugger over LLDB.
- Integrated UI Designer and support of the Reveal app (via a plugin).
- Running and debugging iOS applications on a device or in a simulator.
- Visual unit test runner for OCUnt, XCTest, Kiwi and Google Test, as well as many code generation features for writing unit tests.
- Integration with many popular Version Control Systems, with a unified UI for Git, SVN, Mercurial, Perforce and CVS.
