YT YouTrack

Issue tracking and agile project management

Work as a team
YouTrack can benefit everyone in your company! Customize projects for different departments and create processes that bring teams together.
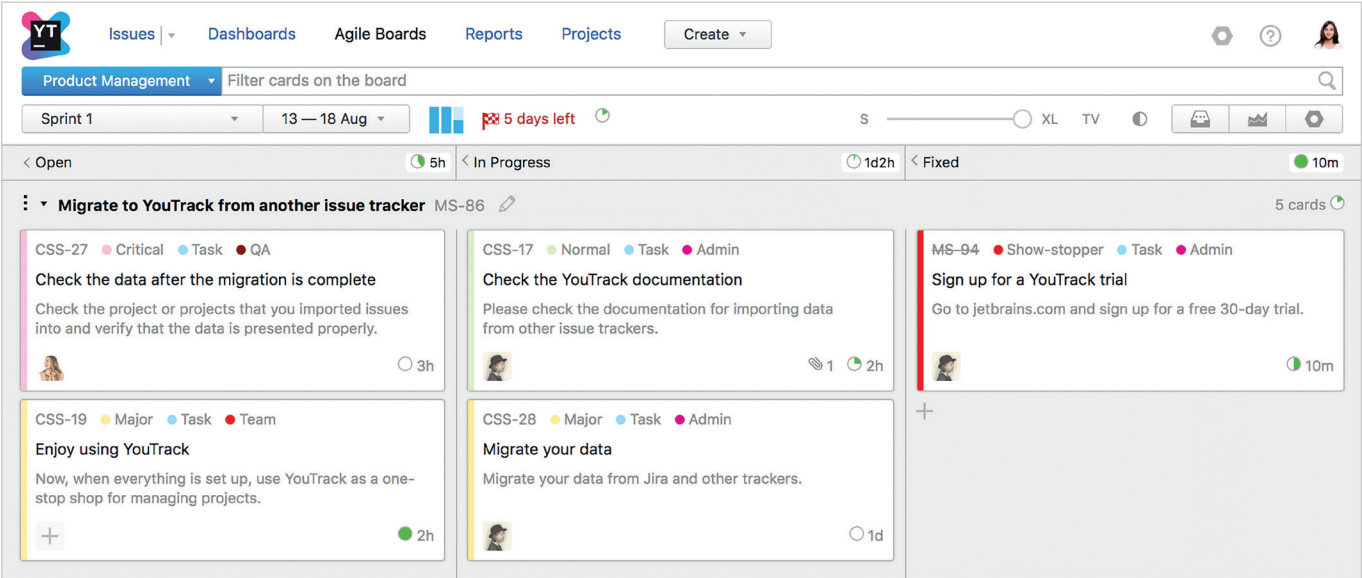

Migrate painlessly
YouTrack provides one-click import from Jira and ready-to-use scripts to migrate from any common tracking system.

jetbrains.com/youtrack

Dare to be agile

• Use Agile Boards for Scrum, Kanban or a mixed process

• Manage product backlog and plan your sprints

• Create workflows to customize YouTrack for your process

• Filter issues quickly with smart search queries

• Create issue drafts and manage them at any time

• See changes that are applied on the board or in the backlog in real time

TC TeamCity

Continuous integration and deployment

Integrate and deploy continuously

• Create deployment pipelines

• Set up infrastructure as code using the TeamCity Kotlin DSL

• See the build status and results on the fly

• Use multiple deployment environments with deployments history

• Store and manage artifacts with built-in artifacts storage

• Manage permissions granularly, via project, sub-project, and user group roles
