

Swift execution of your bright ideas

## Key Facts

AppCode is a professional iOS/OS X IDE built on IntelliJ Platform. It helps developers create outstanding apps for Apple devices such as Macs, iPhones and iPads.

## Key Benefits

In the finest tradition of JetBrains IDEs, AppCode's biggest strengths are advanced code analysis routines and a smart editor enabling intelligent code completion, powerful refactorings, auto-import, one-click code navigation, automatic code formatting, and many more productivity-boosting features. This, along with transparent integration with Xcode, smart actions for CocoaPods and support for multiple languages, makes AppCode a powerful working tool—not only for professional iOS developers but also for those just joining their ever-growing camp.

## Key Features

- Full Xcode interoperability—just open and create Xcode projects from AppCode. The latest Xcode is supported.
- Smart automatic actions for CocoaPods, a popular Objective-C library manager.
- Support for Objective-C, C, C++ (including G++ and libc++), Swift, HTML, JavaScript, XML, and CSS.
- Finest coding assistance and safe automated refactorings.
- Code analysis to keep a watchful eye on the quality of your code, with on-the-fly quick-fixes available.
- Integrated graphical debugger over LLDB.
- Integrated UI Designer and support of the Reveal app (via a plugin).
- Running and debugging iOS applications on a device or in a simulator.
- Visual unit test runner for OUnit, XCTest, Kiwi and Google Test, as well as many code generation features for writing unit tests.
- Integration with many popular Version Control Systems, with a unified UI for Git, SVN, Mercurial, Perforce and CVS.

## System Requirements

OS X 10.9 or higher  
Xcode 6.4 or higher  
2 GB RAM recommended  
200 MB hard disk space + at least 200 MB for caches
