

KEY FEATURES

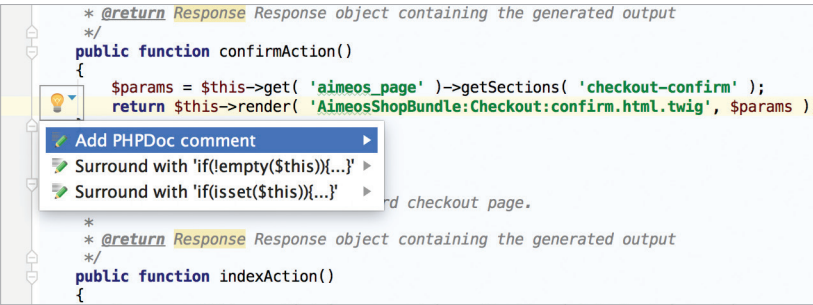

Smart PHP Code Editor

PhpStorm features an editor that actually “gets” your PHP code and deeply understands its structure. The IDE provides the best code autocompletion, refactorings, on-the-fly error prevention, supports language mixtures and more. Automated refactorings treat your code with care, helping you make global project changes easily and safely.

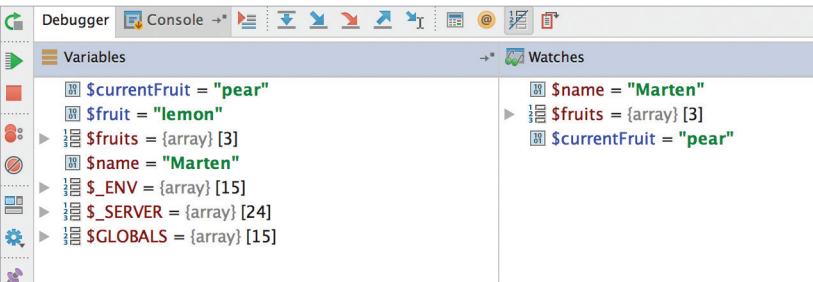

Code Quality Analysis

Hundreds of code inspections verify your code as you type, inspecting the whole project for possible errors or code smells. PHPDoc support, code (re)arranger, code formatter with code style configuration and other features help you write neat code that's easy to support.

Debugging, Testing and Profiling

PhpStorm is renowned for its zero-configuration Visual Debugger, providing extraordinary insight into what goes on in your application at every step. It works with Xdebug and Zend Debugger, and can be used both locally and remotely. Unit Testing with PHPUnit, BDD with Behat and profiler integration are also available.

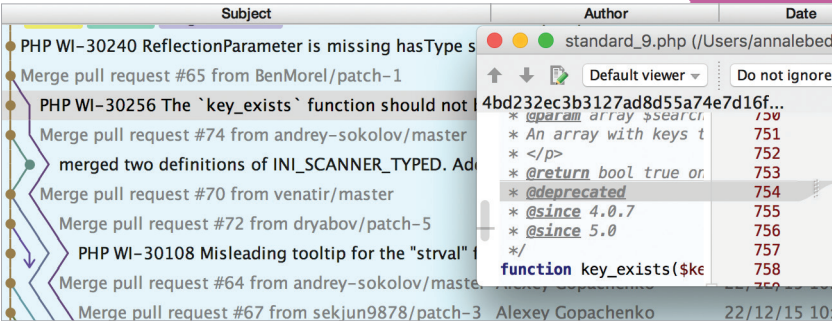

jetbrains.com/phpstorm/features

Complete Development Environment

Perform many routine tasks right from the IDE, thanks to Version Control Systems integration, support for remote deployment, databases/SQL, command-line tools, Vagrant, Composer, REST Client, and many other tools.

Front-End Technologies

The most of the cutting edge front-end technologies, such as HTML5, CSS, Sass, Less, Stylus, CoffeeScript, TypeScript, Emmet, and JavaScript, with refactorings, debugging and unit testing are available. See changes instantly in the browser thanks to Live Edit.

SUPPORTED TECHNOLOGIES

- **PHP Code Editor**
 - PHP 5.3, 5.4, 5.5, 5.6, 7.0
 - Code Analysis
 - Code Completion
 - Refactorings
 - Code Generation
 - PHPDoc Support
 - Quick Fixes
 - PHP Code Sniffer
 - PHP Mess Detector
- **Smarty, Twig, Blade**
- **Unit Testing**
- **Behat**
- **Debugging & Profiling**
 - Xdebug,
 - Zend Debugger
- **Databases & SQL**
 - 10+ dialects
 - and refactoring
- **Frameworks**
 - Symfony
 - Drupal
 - WordPress
 - Zend
 - Magento
 - CakePHP
 - Yii
 - Laravel
 - Joomla!
- **External Tools**
 - Local and SSH based
- **Git/SVN/HG/CVS/TFS..**
- **Terminal, SSH**
- **Remote Hosts Deployment**
 - FTP/SFTP/FTPS
 - Local or mounted folder
- **Emmet**
- **Remote PHP Interpreters**
- **Issue Trackers Integration**
 - With task context switching
- **Built-in web server**
- **HTML5/XML/Schema**
- **CSS/Sass/LESS/SCSS**
 - +Stylus, Compass & more
- **JavaScript**
 - ECMAScript Harmony
 - CoffeeScript
 - TypeScript
 - Dart
 - NodeJS
 - AngularJS
