

IntelliJ IDEA Training

Service Description

Service Code	PS-EDU-IDEA
Service Name	IntelliJ IDEA Training
Associated Products	IntelliJ IDEA
Service Provider	JetBrains Professional Services
Service Type	Education

Overview

IntelliJ IDEA is a powerful, feature-rich IDE built to accelerate software development and supercharge developer productivity – but even experienced developers often only scratch the surface of what it can do.

Our instructor-led IntelliJ IDEA Training helps development teams unlock the full potential of the IDE to maximize your investment in tooling. Through live sessions, hands-on exercises, and real-world scenarios, your team will learn how to work faster, write better code, and take advantage of the smart features including AI-powered assistance that make IntelliJ IDEA stand out.

Who We Serve

- **New to IntelliJ IDEA:** teams migrating to IntelliJ IDEA from other environments will get a solid foundation to start strong.
- **Experienced users:** developers already using IntelliJ IDEA will sharpen their skills and adopt advanced productivity techniques.
- **Development leaders:** managers and team leads will learn how to elevate developer productivity and standardize IDE practices across teams.

What You Gain

- **Faster onboarding:** new hires become productive in IntelliJ IDEA more quickly, reducing ramp-up time and support overhead.
- **Increased productivity:** developers save time on search and navigation, testing, refactoring, and other routine tasks.

- **Fewer errors and review cycles:** smart inspections, consistent formatting, and better use of code analysis and testing tools lead to cleaner and more maintainable code, and smoother pull requests.
- **Higher developer satisfaction:** teams gain confidence and fluency in their tools, improving morale and retention with the employer ([learn more](#)).
- **Stronger return on tooling investment:** you get more value from the IntelliJ IDEA licenses you're already paying for ([learn more](#)).

Service Scope

- **Official JetBrains Training:** delivered via JetBrains Professional Services with experts selected and trusted by JetBrains.
- **Live instructor-led sessions:** interactive workshops with demos, hands-on exercises, and real-time Q&A.
- **Private service:** closed-group format, dedicated training for your developers only, no outside participants.
- **Replay anytime:** workshops may be recorded so your developers can revisit key moments.

Pricing, Delivery, and Terms

- **Pricing model:** fixed price for a 6-hour online workshop.
- **Group size:** designed for up to **16** participants. An absolute maximum of **20** is possible with an additional fee per extra seat. For groups larger than 20, we recommend booking an additional workshop.
- **Delivery method:** remote by default. On-site delivery is available upon request and incurs additional travel costs as well as increased lead time for logistics planning.
- **Language:** the language of instruction is English.
- **Lead time:** trainings are typically scheduled within **8** weeks of request.
- **Customization:** content can be tailored to your team's needs. Customization requires additional design effort and incurs extra costs (scoped and quoted in advance).

Prerequisites

To ensure a smooth and productive workshop experience, participants are expected to have the following:

- IntelliJ IDEA Ultimate installed with a configured Java SDK and Git.
- Access to the example project repository, which will be shared in advance for download.
- Permission to install software on participant's laptops if required during the training.
- A stable internet connection.
- Access to the agreed video conferencing platform.

Additional Services

- **Custom curriculum:** for teams with unique stacks or goals, we can adapt the standard training agenda to best fit your needs, or create a fully customized educational program.
- **Integration consulting:** learn how to get the most out of the JetBrains ecosystem by integrating IntelliJ IDEA with other tools like YouTrack, TeamCity, Qodana, and IDE Services. We'll help you design efficient workflows and optimize your development lifecycle.
- **Custom plugin development:** if your team has unique needs that go beyond the out-of-the-box features, our developers can build custom IntelliJ IDEA plugins tailored to your environment and workflows.
